

# ANUPRITA KAPLE

New York (open to relocation) | +1(607) 697- 4233 | [anuprita1009@gmail.com](mailto:anuprita1009@gmail.com) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## SUMMARY

Product, strategy, and operations professional with 4+ years of experience across global manufacturing, supply chain, and digital transformation, delivering \$6M+ in business impact through data-driven solutions and cross-functional leadership.

## SKILLS

- **Strategy & Product:** Strategy & Planning, Market Research, GTM Strategy, Product Development, Business Case Development, Decision Analysis
- **Operations & Program Management:** Program Management, Supply Chain, Capacity Planning, Demand Forecasting, Process Improvement, Stakeholder Management, Risk Management
- **Data Analytics & Visualization:** Python, R, Power BI, Palantir, SAP, Excel, SCADA, CAD, PLM
- **AI & Emerging Technology:** LLM/RAG, AI Agents, MCP, Prompt Engineering, Claude Code, Automated Workflows

## WORK EXPERIENCE

### NESTLÉ USA — Strategy Consultant, Marketing Immersion

Ithaca, NY | Jan 2026 – May 2026

- Benchmarked Nestlé's competitive position across 3 tiers of frozen meals using Statista and Mintel data to inform product portfolio and positioning strategy.
- Led qualitative and quantitative consumer research, including a 7-person focus group and 200-respondent conjoint survey, identifying optimal product attributes across price, serving size, flavor, and cooking time.
- Delivered a validated GTM strategy for a 3-product portfolio targeting Gen Z, with 3 of 4 recommendations independently confirmed by Nestlé's internal marketing team.

### FORVIA — Senior Industrial Development Engineer, CEER EV Launch Program

Riyadh, Saudi Arabia | Dec 2024 – May 2025

- Delivered 63 EV prototype car-sets in 80 days, coordinating engineering design, supply chain, assembly operations, and customer management to meet an accelerated launch timeline.
- Managed ~\$2M in inventory across the China–Saudi Arabia supply chain, implementing FIFO storage and tracking scrap and consumption to maintain 100% on-time delivery of cockpit and center-console components.
- Improved parts availability across 116 components by identifying 5 chronically at-risk parts through scrap-rate and customs-delay analysis, enabling proactive manufacturing in China and achieving 100% parts availability with zero line stoppages.
- Resolved component allocation conflicts across suppliers by calculating true demand with a 10% scrap buffer, reallocating surplus inventory to suppliers facing shortages and sustaining zero customer complaints.

### FORVIA — Senior Development Engineer, Digital Transformation

Pune, India | Oct 2023 – Dec 2024

- Architected and deployed a Palantir-based global capacity planning platform across 63 manufacturing sites, unifying fragmented operational data to secure \$6M in projected 2024 savings through data-driven investment decisions.
- Standardized OEE/TEEP/AUR performance tracking across 1,800 assets in four global regions using Palantir and Power BI, giving leadership real-time visibility into 46% of the fleet for capacity and downtime decisions.
- Built and presented a data-driven business case to the CAPLA Steering Committee, securing budget approval to replace a contractor-dependent local system with standardized DMC SAP at the Pretoria plant, reducing production data lag from 4 days to same-day.
- Trained 100+ employees across plant-to-regional-manager levels on CAPLA and OEE/TEEP/AUR methodology, enabling 58 of 63 global plants (92%) to independently track equipment performance within 7 months.

### FORVIA — Design & Development Engineer, Stellantis & Renault Group

Pune, India | Jun 2022 – Oct 2023

- Delivered 2D/3D CAD modeling for center-console and instrument-panel components on the Citroën facelift program, managing design tasks through Kanban and Dassault 3DEXPERIENCE to meet tool-kickoff timelines.
- Managed ~20 engineering change requests monthly across 5+ Renault programs, coordinating drawing and solid-part updates through Dassault PLM to deliver within 1–2 days of submission.

### LARSEN & TOUBRO — Process Improvement Analyst, Heavy Engineering

Surat, India | Sep 2021 – Jan 2022

- Developed predictive distortion-control models for tubesheet welding by analyzing laser-measured deflection across 4 samples, reducing the 144-hour welding cycle by ~28% (~40 hours per tubesheet) and averting ~\$5K rework per sheet.

### DriveBuddyAI — Business & Technology Analyst, AI/Computer Vision

Pune, India | Apr 2020 – Feb 2021

- Built an end-to-end C++/OpenCV computer-vision pipeline for a fleet-safety platform, automating live camera capture, image storage, and video reconstruction as sole technical contributor.

## AI & DIGITAL SYSTEMS (2025-26)

- **Menu Intelligence — LLM + RAG Competitive Analysis**

Built a competitive menu-intelligence tool analyzing 35 dishes across 3 restaurant chains, with Direct Prompting and RAG independently identifying the same top 4 recommendations, enabling data-driven menu strategy without a dedicated research team.

- **MCP Weather Tool — Agentic AI Tooling**

Designed and deployed two MCP servers in Python and Node.js/TypeScript exposing six tools for real-time weather and macOS Calendar automation; integrated with Claude Desktop using async I/O and JSON-RPC to demonstrate end-to-end agentic AI tooling.

- **Career Ops Agent — Autonomous Job Intelligence System**

Built an autonomous job-search agent in Python, monitoring 110+ companies across 6 ATS platforms twice daily with self-healing ATS detection, replacing an estimated 4 hours of daily manual searching with automated Excel tracking and email digests.

## SELECTED PROJECTS

- **Big Red Bites — Strategic Planning & Operational Roadmap | Project Manager**

Led a 14-member hybrid cross-functional team across Research, Design, and Finance, implementing Notion-based Kanban and a 7-month Gantt roadmap; developed the UI/UX prototype, \$106K budget, technical requirements, and execution-ready project plan, earning 3rd place in Cornell Engineering Management's Project Video Competition.

- **Strategic Market Entry — Plant-Based Protein Bar**

Built a data-driven U.S. market entry strategy using K-means/PCA pricing segmentation, EMV decision trees, MAUT, risk modeling, and 10,000 Dirichlet simulations, recommending a regional pilot with \$42.53M expected monetary value and 99.94% strategic stability.

## LEADERSHIP & THOUGHT LEADERSHIP

- **President, Cornell Graduate Product Management Club | 2025–2026**

Established the club as an officially recognized and funded university organization, building its inaugural executive board and launching cross-university Product Management Hackathon partnerships.

- **Fellow, Cañizares Center for Emerging Markets | Cornell University | 2025–2026**

Authored a data-backed analysis of India's digital retail transformation, examining how AI forecasting, UPI, ONDC, and digital ordering are reshaping traditional kirana supply chains.

## EDUCATION

**Cornell University, College of Engineering — M.Eng., Engineering Management**

Ithaca, NY | Aug 2025 – May 2026

Relevant coursework: Data Analytics, Management Consulting, Applied Operations Strategy, AI Applications for Engineering Managers, Strategic Product & Marketing

**Vishwakarma Institute of Technology — B.Tech., Mechanical Engineering**

Pune, India | Aug 2018 – May 2022
